KEVIN JOHN

MULTI-CLOUD SECURITY & SOFTWARE ENGINEER

Columbia, MD • kjohn7160@gmail.com

EDUCATION

University of Maryland, College Park | **Bachelor of Science in Information Science** | Spring 2025

Minors: ACES Cybersecurity and Global Terrorism Studies

PROFESSIONAL CERTIFICATIONS

AWS Certified Solutions Architect – Associate • AWS Certified AI Practitioner • HashiCorp Certified: Terraform Associate (004)

PROFESSIONAL SUMMARY

Multi-Cloud Security and AI Engineer serving as a Technical IAM Product Owner, with a focus on enterprise identity architecture, cloud infrastructure, and intelligent security automation. Works across AWS, Azure, Google Cloud, Oracle Cloud, and Alibaba Cloud, designing secure access models, developing infrastructure automation, and exploring agentic AI solutions for identity governance and risk remediation. Combines cloud engineering, security architecture, and emerging AI technologies to modernize enterprise security operations.

TECHNICAL SKILLS

Cloud Platforms: AWS, Microsoft Azure, Google Cloud Platform (GCP), Oracle Cloud Infrastructure (OCI), Alibaba Cloud

Cloud Security & IAM: AWS IAM, IAM Identity Center, AWS Organizations, SCPs, AWS Control Tower, RBAC, PAM, Workload Identity Federation, Zero Trust, IAM Access Analyzer, Identity Governance

Platform Engineering & DevOps: Terraform, IaC, Harness CI/CD, Git, GitHub, CloudFormation, StackSets, Temporal, Serverless Architecture, AWS Lambda

AI & Intelligent Automation: Model Context Protocol (MCP), MCP Server Development & Integration, Amazon Bedrock, Agentic AI, LLMs, AI-Assisted Policy Analysis, Automated IAM Remediation

Programming & Automation: Python, Bash, AWS CLI, Boto3, REST APIs, JSON, YAML

Security & Observability: CloudWatch, CloudTrail, GuardDuty, EventBridge, SNS, Security Monitoring, Policy Validation, UAR, Compliance Automation

PROFESSIONAL EXPERIENCE

Marriott International | **Technical IAM Lead Engineer – Multi-Cloud Security & Platform Engineering**

June 2024 – Present

- **Enterprise Cloud Governance & Security Architecture:** Own enterprise AWS governance standards and security guardrails using AWS Organizations, SCPs, and Control Tower to standardize account governance, establish security baselines, and enforce organizational access boundaries.
- **SCP Governance & CI/CD Automation:** Engineered policy-as-code workflows with Terraform, Harness CI/CD, and Git to automate SCP development, validation, and deployment, enabling auditable, version-controlled governance changes.
- **Enterprise Root Governance:** Led centralized root governance across AWS accounts, strengthening MFA, privileged activity monitoring, security alerts, and CloudTrail traceability; extended governance initiatives to Alibaba Cloud.
- **Cloud Security Monitoring & Alerting:** Developed event-driven monitoring with CloudTrail, EventBridge, CloudWatch, and SNS for root activity, privileged API operations, and security-sensitive events.
- **Privileged Access & Breakglass Engineering:** Designed and enhanced AWS emergency access solutions with MFA, controlled privilege elevation, and auditable breakglass workflows to reduce standing administrative access.
- **AWS Temporary Elevated Access Management (TEAMS):** Drive architecture and adoption of temporary elevated access, time-bound privilege elevation, and persona-based access to restricted AWS capabilities.
- **GCP Privileged Access Management (PAM):** Evaluated just-in-time privileged access, temporary IAM bindings, entitlement configurations, and approval workflows to support time-bound access governance.
- **GCP Workload Identity Federation:** Implemented and validated AWS–GCP workload identity federation to authenticate without long-lived service account keys and enforce least-privilege resource access.
- **AI-Powered IAM Engineering & MCP Servers:** Developed an IAM MCP server integrating policy validation and permission simulation for AI-assisted identity analysis, policy assessment, and security automation.

- **Enterprise Identity Architecture & RBAC:** Led IAM persona standardization, aligning Identity Center groups, permission sets, and access requirements with least-privilege RBAC models.
- **Least-Privilege Permission Set Migration:** Led migrations from broad engineering access to read-only and persona-based permission sets, supported by Terraform-managed guardrails and temporary privilege pathways.
- **IAM Access Request & Provisioning Automation:** Drive automation of requests, approvals, provisioning, and entitlement lifecycle management through standardized self-service processes.
- **Cloud Infrastructure & Platform Automation:** Built reusable security and IAM deployments using Terraform, CloudFormation StackSets, and Python to reduce manual configuration across AWS accounts.
- **User Access Reviews & Continuous Compliance:** Engineered Temporal-based UAR workflows for IAM discovery, periodic access review, privileged identity analysis, and audit evidence collection.
- **Agentic AI & IAM Risk Remediation:** Architecting remediation solutions with IAM Access Analyzer, Agentic AI, and Temporal for risk analysis, controlled policy changes, human approvals, and auditability.
- **Service Account & Credential Lifecycle Automation:** Drive service account governance automation for access key rotation, identity ownership, stale credential detection, and reduced reliance on long-lived keys.
- **IAM Cleanup & Access Optimization:** Lead cleanup of unused permission sets, redundant Identity Center groups, excessive entitlements, and direct user assignments to reduce identity sprawl.
- **Generative AI Security & Governance:** Architected Bedrock and AWS Marketplace controls using SCP exceptions, IAM role-based access, and secure model enablement workflows.
